Functions 3: Another Example

Elements of a function

```
function replace(list, old, new) {
  let copy = list.slice();
  let indexOfOld = copy.indexOf(old);
  if (indexOfOld >= 0) {
      copy[indexOfOld] = new;
  }
  return copy;
}
```

Call a function

Inputs are assigned to parameters; order matters

The result of evaluating a function is its return value
